Experience

Independent iOS Developer

May 2018 – Feb 2020 | VN

- Helping several clients either develop iOS apps from scratch, add certain features or fix bugs.
- Working with a diverse group of clients in creating data-driven iPhone and iPad applications.
- Collaborating on API design with backend developers to ensure efficiency.
- Creating highly customized user interfaces and animations.

Projects

Skin Detective, 4 months

App store: <https://apps.apple.com/vn/app/skin-detective/id1497658368>

- Using Swift to build both Skin Detective for users and Skin Detective for doctors from scratch.
- Designing scalable Firestore to easily store user data and messages data.
- Discuss and debate with AI engineers and Designer to ship great features to customers.

Swipe Match Tinder, 6 months

github: <http://github.com/ldakhoa/swipematchtinder>

- Implementing complex UI of the app, including a container for cards that can be swiped left and right.
- Using UIKit Gesture to control swiping behavior, and Core Animation to animate swiping off-screen, cards entering screen, and animation for matching likes.
- Using Swift to develop the iOS application.

Fodcast, 3 months

github: <http://github.com/ldakhoa/fodcast>

- A mobile app that users listen to podcasts or audiobooks, support users download episodes and listen in the background.
- Using Swift to develop this application, Alamofire and FeedKit to work with iTunes Store API.

Insta Up, 3 months

github: <http://github.com/ldakhoa/InstaUp-iOS>

- A photo and video-sharing social networking clone from Instagram when I started to develop iOS applications. Users can like, comment on each post.
- Using Objective-C to build the iOS application.

Education

International University – Vietnam National University
B.S. Computer Science

2017 — Exp 2021
